

ABSTRACT

The present invention provides a recycling processing method for used heat-resistant and high-performance spun yarn products characterized in that heat-resistant and high-performance spun yarn products are preliminarily washed at request and undergo crushing processes, in that a crushed material thus obtained is opened to become a cotton-like material, and in that the cotton-like material is spun for recycling the spun yarn, and according to this method, used products of heat-resistant and high-performance spun yarn can be recycled particularly as yarn.
